Experience

○ Gravity Infotech - Utran , Surat

2023 - Current

I have 8 months of experience as a front-end developer. you have gained skills and knowledge in designing and building responsive web designs for the financial industry. i worked with technologies such as Bootstrap, CSS, and JavaScript frameworks, and you have a strong grasp of user experience (UX) and user psychology.

Achievement of increasing the conversion rate of a website by 20% to 30% through improved code and design is a significant accomplishment for your relatively short time in the industry. Additionally, your experience in creating websites that support both left-to-right (LTR) and right-to-left (RTL) languages demonstrates your adaptability and versatility as a developer.

Projects

Grower - Online grocery shopping web
